

# Portable Tracker Placement

## Under Vehicle Mount

To receive ideal GPS reception, place the device below the “Passenger Compartment Areas” or “Back Area,” on the underside of the vehicle. Placement in other areas may cause signal obstruction, which can lead to poor tracking results. Never place the device near a heat source, fuel tank or fuel lines.

**Place with tracker antenna facing down - toward the ground.**

**Place below Passenger Compartment Areas or in Back Area on the UNDERSIDE of Vehicle.**
