

## NEMABox System

The **NEMABox System** is a remote-view video surveillance system. Capable of being used in various settings, the system is weatherproof and is housed in a portable enclosure. For rapid deployment, multi-user accessibility and pre-configured electronic devices are supported. Using the 4G AT&T or Verizon Network, the NEMABox System is reliably live-streamed to a remote location via an intelligent device reset technology.

The system's technology uses a Canon 20x optical zoom high-resolution camera. Using a web-browser or mobile device, users can use a zoom in and out feature to view specific objects. Three viewing windows enable a 220-degree angle with pan, tilt, and zoom features.
